

Hi,

Hope you are doing well.

I've been working on the Fetch Rewards data, and I want to give you an update on my progress and would like your help with the data quality problems.

As I explored the data, I found some data quality issues with the datasets:

1. There are **283 duplicate records** in the Users Dataset.
2. All the datasets have a large number of **missing values**.
3. There is also an **outlier problem** in all datasets.

To solve these problems, I would like to have more information:

1. Information about the **data-generating process**
2. Information about which data is important and which is not
3. Detailed **metadata** for all the datasets

Let me know your ideas, and I will be happy to schedule a meeting with you if you think it is necessary.

Best,

Clara Tang
